

Helloblock is a graphical programming software for STEAM education based on secondary development for Scratch 3.0. It is suitable for kids over 8 years old. Compared to C programming, Helloblock displays complex code in a graphical form, which is more intuitive and easier to understand and study. The basic functions of Helloblock are as follows:

1. Write programs by dragging blocks.
2. Achieve interesting phenomena by building blocks.
3. Convert the graphical program of building block into C language code.
4. Applicable to many Yahboom Arduino robot car and kits
5. Combine hardware to achieve more rich ideas
