

Size: 90.4*41*11MM	Remote control range: 8-10m
Infrared carrier frequency: 38KHZ	Battery: CR2032-3V Button lithium battery
Effective life: more than 200,000 times	Main control chip: UPD6122
User code: 00FF	Encoding format: NEC

In the spectrum, electromagnetic waves with a wavelength from 760nm to 400um are called infrared rays, which is an invisible light. At present, most video and audio equipment can be remotely controlled by this method. For example, the televisions, air conditioners, and DVD players. Infrared technology is widely used and affordable, so infrared remote control is the ideal way to control our daily devices.
