

a. Double-click to open the Arduino software shortcut on the desktop that we have installed, and you can enter the Arduino IDE programming interface as shown in the figure below.

b. Switch the language to change the font: Click [File] --- [Preferences] in the menu bar and select the corresponding language. We also can change the font size and display line number.

c. After modification, we click [OK]. Then close the Arduino IDE interface and re-open it, you can see that the settings have taken effect at this time.
