

Note :

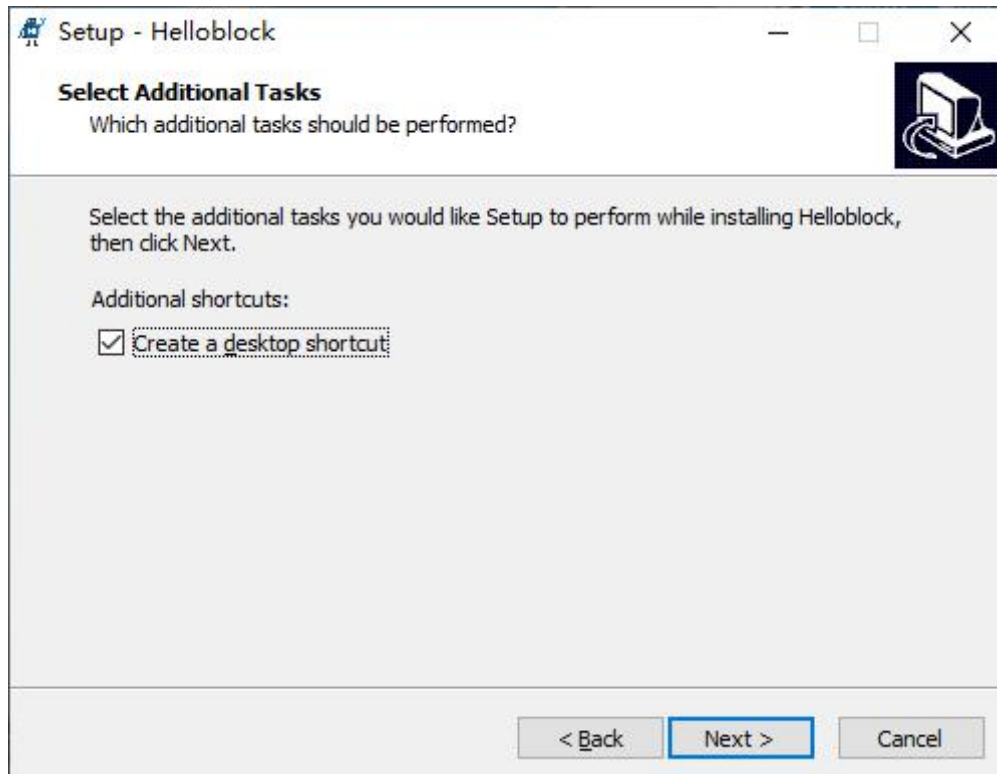

- a. Helloblock software supports 32 and 64-bit Windows7 operating systems but XP systems is not available now.
 - b. Installing Helloblock will bundle and install the Arduino IDE and related drivers. If the Arduino driver and CH340 driver have been installed on the computer before, the driver installation steps may be skipped or the driver installation fails, but it will not affect normal use.
 - c. Installing a new version of Helloblock or repeating the installation may skip the step of selecting an installation path, and install or update under the previous installation path by default.
1. We will provide Helloblock.exe file, you can double-click to install it.

Tips: V1.0.9_x86 is the current version.

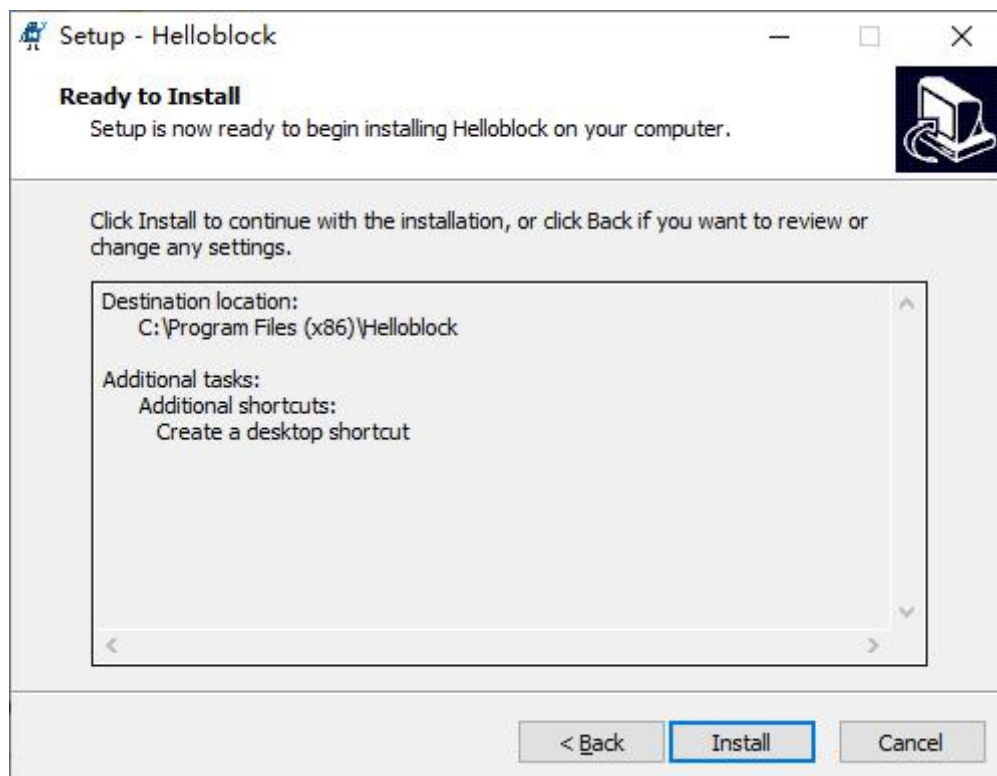

2. When installing for the first time, you will be prompted to choose an installation path. The default installation path is C:\Program Files (x86)\Helloblock. If you need to change the installation path, you can modify it by yourself. Then, click "Next". 64-bit systems are compatible with 32-bit software.

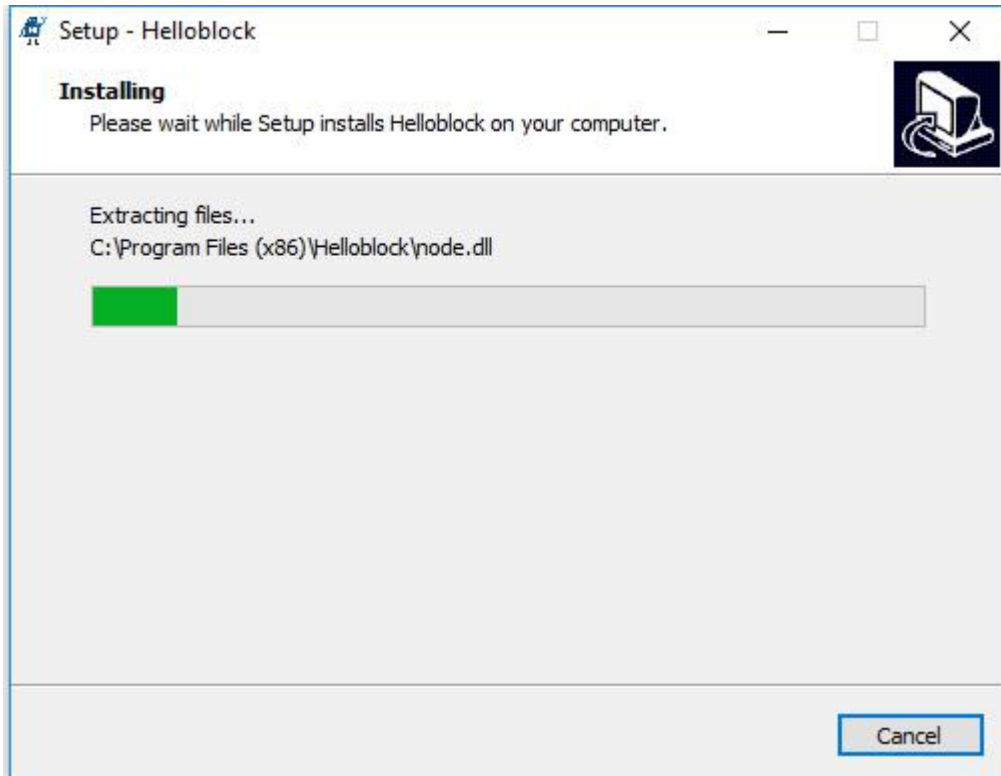

3. Choose "create a desktop shortcut" and click "Next".

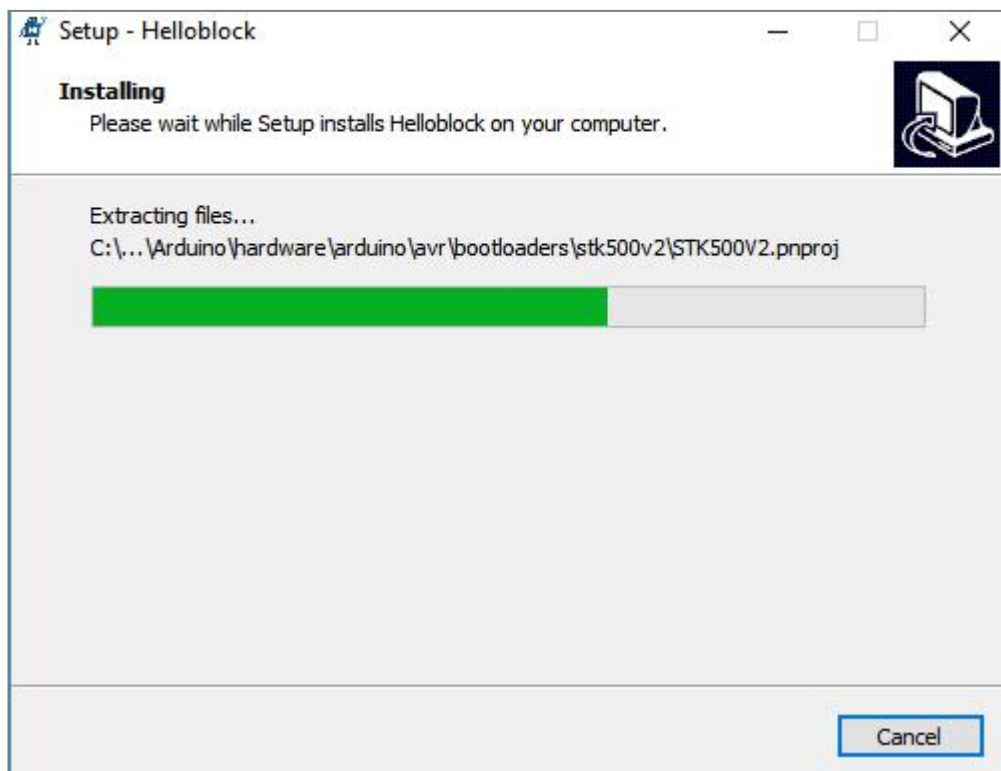

4. Click "Install".

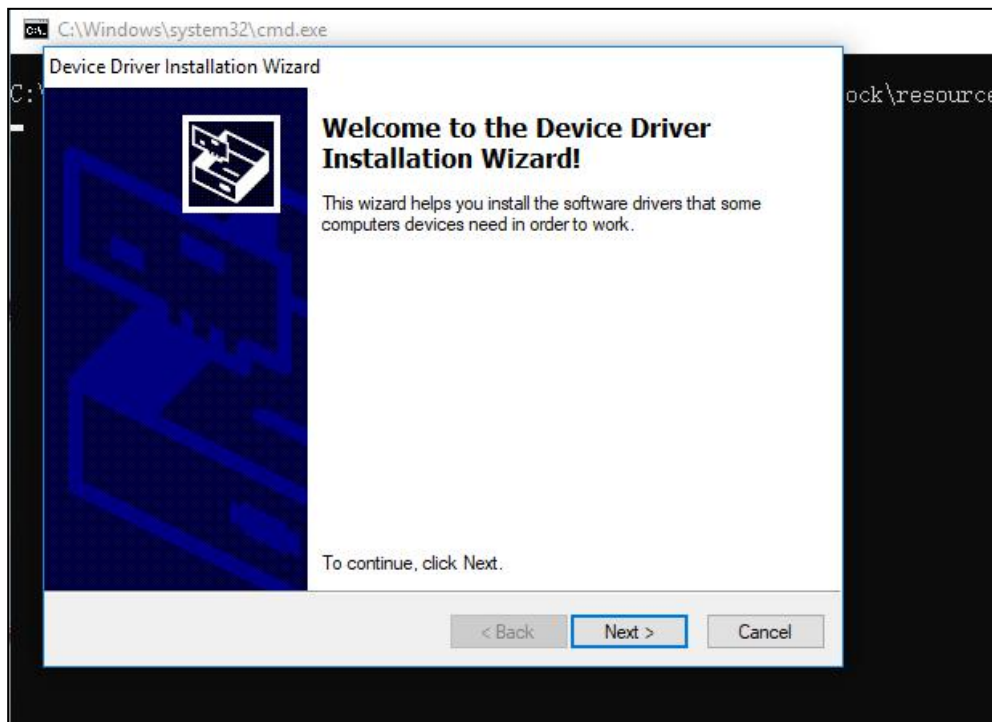

5.Wait patiently for the installation progress bar to scroll.

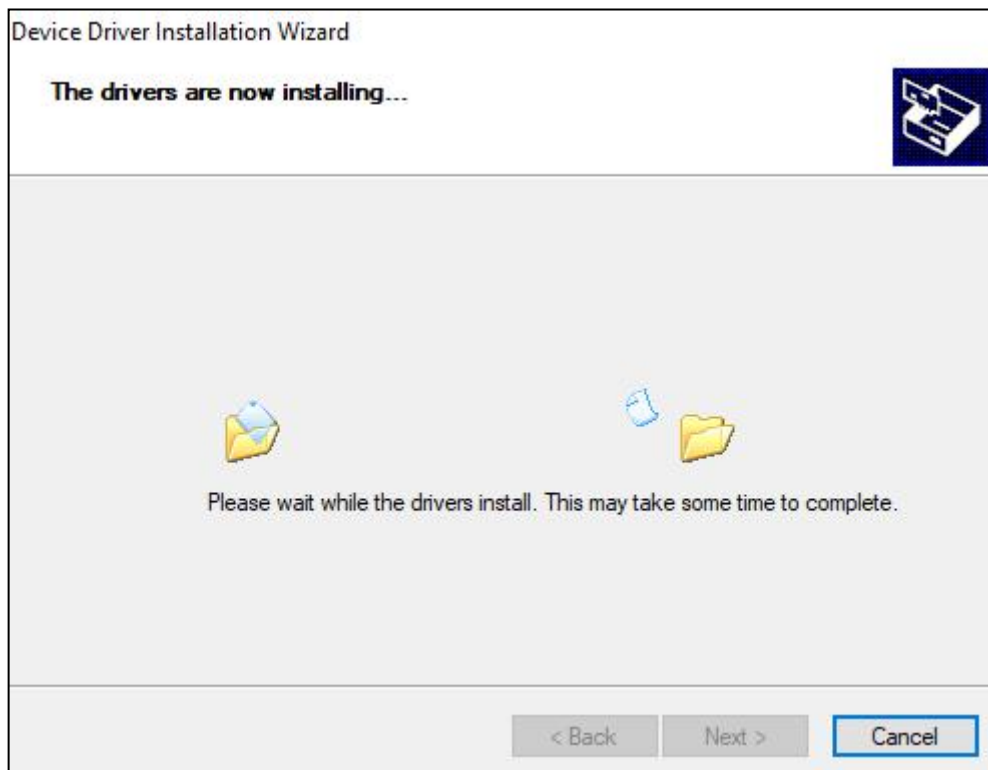

6.When the progress bar is completed, it will prompt that the serial port driver is being installed.

7. Then, the device driver installation wizard will pop up automatically, this wizard will help you install the software driver. Without these drivers, some computer devices may not work properly with the helloblock software. Please click "Next".

8. The interface shown in the figure below indicates that the driver is being installed.

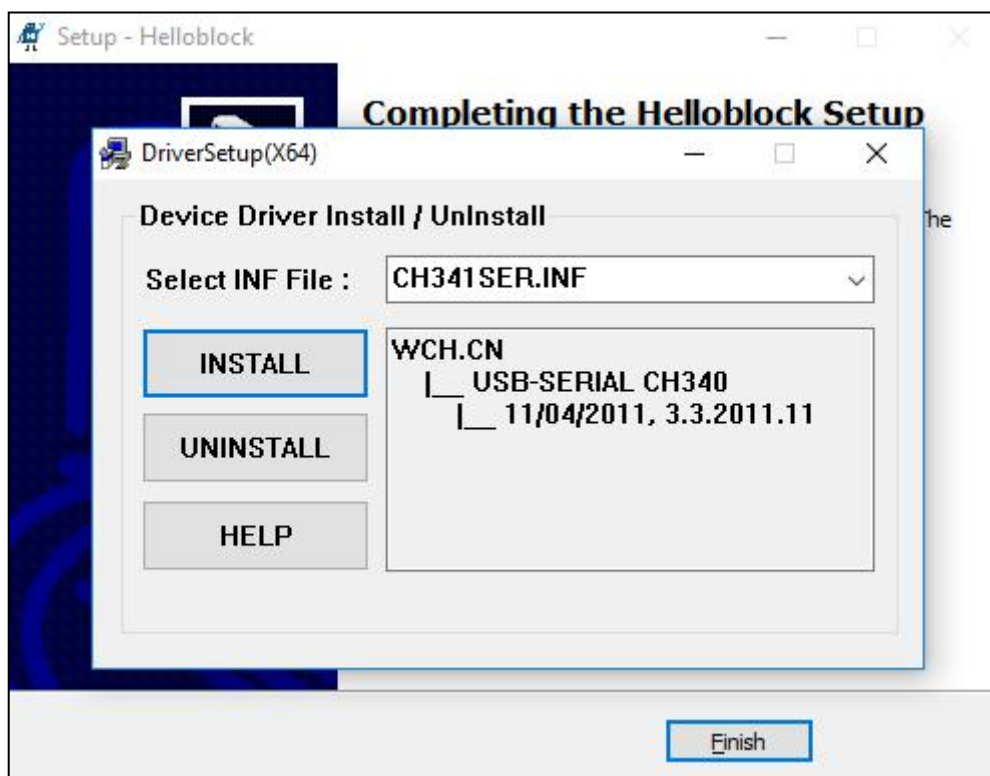

9.If any prompts pop up on your computer, check “trust the software” and click “install”.

10.When the following interface appears, the driver has been successfully installed.

11.Next, you will see the interface as shown below, prompting to install the CH340 serial driver. If the CH340 driver has been installed on the computer, it will prompt installation failure. If you need to re-install, you can click “UNINSTALL” and then click “INSTALL”.

12. Finally, click “Finish” to complete the installation of the Helloblock graphical programming software, Helloblock will be turned on by default after installation.
