

NC: no need connect	VCC: connect 3.3V or 5V
GND: connect GND	OUT: press the key to output low level, release the output high level
Working Voltage: 3V/5V	Size of module:29.4mm*28.8mm

Buttons are indispensable in our life, which can be used as switches for many products. This button module is a self-resetting button. Its feature is that when the button is pressed, the action is triggered, OUT pin and GND pin will conduct. When the button is released, OUT pin is in a floating state. When we set the OUT pin as a pull-up input mode and use a multimeter to test this pin, we can find that the OUT pin is high level. When the button is pressed, the OUT pin becomes low level.
