a. When we open the Helloblock programming software, there are no Plugkit building blocks in the left side block column, so we need to add it manually, and click the button in the lower left corner as shown in the figure below.

b. Select the Plugkit extension package and click to add it.

c. After the expansion pack is added, we can see that there is an additional type of

 building block on the left, which is the programming building block of the Plugkit kit. If we need to use other Yahboom building blocks to expand the package, we can continue to add.

Note: The building block expansion package needs to be re-added when Helloblock is restarted.

d. At this point, we can start programming
